

Tiger Optics Announces Plan to Relocate and Expand Headquarters to Support Continued Growth & Innovation

Warrington, PA (September 16, 2019) – Tiger Optics ([Tiger](#)), a preferred provider of high-performance laser-based gas analyzers, announced the company's decision to move its headquarters in January 2020 from its current location in Warrington, Pennsylvania, to a newer, larger facility owned by Workspace Property Trust in Horsham, PA. The strategic move of headquarters will support the company's accelerated growth plans and facilitate the expansion of its production, R&D, service and training capabilities.

Relocating its headquarters and expanding the production facility demonstrates Tiger's commitment to strengthening its customer-focus and product offerings, increasing its presence in the industrial gas and semiconductor market, and diversifying its portfolio with new markets and applications; all the while continuing to maintain superior levels of quality and customer service.

Tiger Optics intends to make the most of its larger facility with state-of-the-art cleanrooms, R&D laboratories and NIST traceable calibration equipment to increase production capacity, develop additional research and development capabilities and design new innovative products. The Horsham location will be home to an expanded team of dedicated scientists, engineers, technical field service and sales staff who support customers globally. In addition, there will also be a technical training center dedicated to our customers and distribution partners, where they can receive hands-on technical service and operations training. This training center will enhance our customers and distributors technical knowledge on all Tiger Optics products and help them maintain current and advanced training certificates. "We are very excited to mark a new era of expansion and continued growth for Tiger Optics with our new facility," said Erika Coyne, Ph.D., President of Tiger Optics. "The new space is in line with our vision for the company's future and gives us the opportunity to offer additional innovative products and services, as we continue to fulfill our commitment to quality and service to our customers and partners."

As with its current Corporate location, Tiger Optics' new facility is conveniently located just outside center city Philadelphia, and minutes from the Pennsylvania Turnpike, allowing easy access from major highways and several nearby airports. Dr. Coyne concluded by saying, "We look forward to welcoming our customers, partners, and vendors to our new facility and celebrating with everyone in the New Year!"

Tigeroptics

High-Performance Gas Analyzers

About Tiger Optics

Founded in 2001, Tiger Optics is the preferred provider of high-performance, laser-based gas analyzers that advances industrial standards and enables cutting-edge research. By leveraging the expertise of scientists, engineers and industry specialists, Tiger Optics offers advanced total solutions, field support, analyzer training and advice to help customers improve yields and reduce costs. Creating out-of-the-box solutions that deliver fast, reliable and stable measurements, Tiger Optics supports continuous innovation in gas and chemical production, semiconductor fabrication and many other markets.
